

Most Commonly Used NumPy Commands, Operations, Methods, and Attributes in Data Science

1. Importing NumPy

```
```python
```

```
import numpy as np
```

```
```
```

This is the standard convention for importing NumPy.

2. Creating Arrays

```
```python
```

```
Creating a 1D array
```

```
arr = np.array([1, 2, 3])
```

```
Creating a 2D array
```

```
arr = np.array([[1, 2], [3, 4]])
```

```
Creating an array of zeros
```

```
arr = np.zeros((2, 2))
```

```
Creating an array of ones
```

```
arr = np.ones((3, 3))
```

```
Creating an array with a range of values
```

```
arr = np.arange(0, 10, 2)
```

```
Creating an array with evenly spaced values
```

```
arr = np.linspace(0, 1, 5)
```

```
...
```

### 3. Array Attributes

```
```python
```

```
# Get the shape of the array
```

```
shape = arr.shape
```

```
# Get the number of dimensions
```

```
ndim = arr.ndim
```

```
# Get the size (number of elements)
```

```
size = arr.size
```

```
# Get the data type
```

```
dtype = arr.dtype
```

```
...
```

4. Array Manipulation

```
```python
```

```
Reshaping an array
```

```
arr = np.array([1, 2, 3, 4, 5, 6])
```

```
reshaped = arr.reshape((2, 3))
```

```
Flattening an array
```

```
flattened = arr.flatten()
```

```
Transposing a 2D array
```

```
transposed = arr.T
```

```
Stacking arrays vertically
vstacked = np.vstack((arr1, arr2))

Stacking arrays horizontally
hstacked = np.hstack((arr1, arr2))
...
```

## 5. Mathematical Operations

```
```python

# Element-wise addition
result = arr1 + arr2

# Element-wise subtraction
result = arr1 - arr2

# Element-wise multiplication
result = arr1 * arr2

# Element-wise division
result = arr1 / arr2

# Dot product
dot_product = np.dot(arr1, arr2)
...
```

6. Statistical Methods

```
```python
```

```
Minimum and maximum
```

```
min_val = arr.min()
```

```
max_val = arr.max()
```

```
Sum and product of elements
```

```
sum_val = arr.sum()
```

```
prod_val = arr.prod()
```

```
Mean, median, and standard deviation
```

```
mean_val = arr.mean()
```

```
median_val = np.median(arr)
```

```
std_val = arr.std()
```

```
Finding unique elements
```

```
unique_vals = np.unique(arr)
```

```
...
```

## **7. Indexing and Slicing**

```
```python
```

```
# Accessing a single element
```

```
element = arr[0]
```

```
# Slicing an array
```

```
slice = arr[1:3]
```

```
# Boolean indexing
```

```
arr = np.array([1, 2, 3, 4, 5])
```

```
bool_idx = arr[arr > 3]
```

```
# Fancy indexing
```

```
arr = np.array([1, 2, 3, 4, 5])
```

```
fancy_idx = arr[[0, 2, 4]]
```

```
...
```

8. Broadcasting

```
```python
```

```
Broadcasting an operation
```

```
arr1 = np.array([1, 2, 3])
```

```
arr2 = np.array([[1], [2], [3]])
```

```
result = arr1 + arr2 # Broadcasting addition
```

```
...
```

## 9. Random Numbers

```
```python
```

```
# Generating random numbers
```

```
rand_arr = np.random.rand(3, 3)
```

```
# Generating random integers
```

```
rand_ints = np.random.randint(0, 10, (3, 3))
```

```
# Setting a seed for reproducibility
```

```
np.random.seed(42)
```

```
...
```

10. Linear Algebra

```
```python
```

```
Matrix multiplication
```

```
matmul = np.matmul(arr1, arr2)
```

```
Inverse of a matrix
```

```
inv = np.linalg.inv(matrix)
```

```
Determinant of a matrix
```

```
det = np.linalg.det(matrix)
```

```
Eigenvalues and eigenvectors
```

```
eigvals, eigvecs = np.linalg.eig(matrix)
```

```
...
```

## 11. Saving and Loading Data

```
```python
```

```
# Saving an array to a file
```

```
np.save('array.npy', arr)
```

```
# Loading an array from a file
```

```
arr = np.load('array.npy')
```

```
# Saving to a text file
```

```
np.savetxt('array.txt', arr)
```

```
# Loading from a text file
```

```
arr = np.loadtxt('array.txt')
```
